

DECISION CONSEQUENCE TRAIL

NAME: ALIA ISLAM

Decision Timeline

Time/Event	Decision	Reason	Immediate Consequence	Later Consequence
T+2	Throttle checkout	Contain duplicate charges	Revenue slows	Trust preserved
T+5	Notify support	Consistent messaging	Lower confusion	Fewer escalations
T+10	Delay inventory fix	Financial risk higher	Mismatch remains	Can reconcile later

Protected First

Customer payments and financial trust.

Got Worse

Inventory mismatch and order delays increased, which was acceptable because they were recoverable.

Tradeoff Accepted

Tradeoff	Protected	Pain	Defense
Pause revenue	Customers	Founder	Trust first
Delay inventory	Payment integrity	Ops team	Recoverable

AI / Pressure Moment

Pressure encouraged keeping checkout fully live. I modified that advice by throttling traffic until payment confidence improved.

Final Consequence Judgment

The decision path was defensible because it minimized irreversible financial harm, communicated uncertainty, and accepted recoverable operational pain over permanent trust damage.
