

TRUST / MODIFY / BLOCK CLASSIFICATION

CareerForge Day 5: AI Recommendation Scorecard

NAME: Alia Islam

VARIANT: D5-A

GITHUB: <https://github.com/liacodes49/Career-Forge/tree/day-05-ai-is-not-the-engineer>

ID	AI Claim	Classification	Engineering Action	Risk Level
A	Memory leak / OOMKilled is root cause	TRUST	Verify with pod logs + pool metrics; proceed if confirmed	Low: reversible hypothesis
B1	Restart pods immediately	MODIFY	Restart ONLY after draining in-flight transactions first	Medium: payments in-flight
B2	Increase memory from 512Mi to 2Gi	MODIFY	Defer; check node capacity baseline first	Medium: node OOM risk
C1	Set maxPoolSize=10 in DB config	TRUST	Test in staging; promote to prod only on pass	Low: staging verified
C2	Deploy config change without staging	BLOCK	Mandatory staging gate; reject this recommendation entirely	HIGH: irreversible in prod
D	Zero blast radius, no downstream risk	BLOCK	Conduct dependency audit; never act on unverified blast radius claim	HIGH: false safety claim

CLASSIFICATION CRITERIA:

TRUST

AI claim is consistent with independent evidence. Verifiable before execution. Action is reversible if AI was wrong.

MODIFY

AI recommendation is directionally correct but missing a critical precondition or safety step. Accept the direction; add the missing gate.

BLOCK

AI recommendation is unsupported, assumes false safety, or bypasses a mandatory engineering control. Do not execute. Requires fresh evidence before reconsideration.

DECISION SUMMARY

- 2 recommendations fully TRUSTED (with verification step)
- 2 recommendations MODIFIED with additional preconditions
- 2 recommendations BLOCKED, one deployment shortcut, one false safety claim

Net result: Controlled incident response proceeds. No AI recommendation executed as-is.
